                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             wyb-like protein - Arabidopsis thaliana
Wyb-like protein - The Color
Species are arabidopsis thaliana (mouse-ear cress)
Cjacension: T4853
Rybevan, M.; Hilbert, H.; Braun, M.; Holzer, E.; Brandt, A.; Duesterhoeft, A.; Bancroft, Submitted to the Protein Sequence Database, March 2000
A;Reference number: Z24489

S71285
myb-related protein, 33.2K - Arabidopsis thaliana
myb-related protein, 33.2K - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: 28-Oct-1996 #sequence_revision 27-Feb-1997 #text_change 31-Dec-2004
C;Accession: S71285
SYSTIK, V; Baumlein, H.
Submitted to the EMBL Data Library, September 1995
A;Description: Characterization of two cDNAs encoding MYB-related proteins in Arabidopsi
A;Reference number: S71285
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A;Cross-references: UNIPROT:Q39155; UNIPARC:UP100009D1EE; EMBL:Z54137; NID:g1263096; PI

Biochem. Physiol. 968:239-242(1990).

-I-FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and increases.
                                                                                                                                                                                                                           bromus

Pfam; PF00918; Gastrin, 1.
PROSTE: PS00259; GASTRIN; 1.
Amidation; Cleavage on pair of basic residues;
Direct protein sequencing; Hormone; Pyrrolidone carboxylic acid; Sulfation.

    SUBCELLULAR LOCATION: Secreted.
    SIMILARITY: Belongs to the gastrin/cholecystokinin family.

  Pyrrolidone carboxylic acid. Pyrrolidone carboxylic acid. Sulfotyrosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Phenylalanine amide.

EMBO J. 14:389-396(1995). PROCESSING, AND SULFATION OF TYR-87.

-!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: Two different processing pathways probably exist in antral G-calls. In the dominant pathway progastrin is cleaved at three sites resulting in two major bloactive gastrins, gastrin-34 and gastrin-17. In the putative alternative pathway, progastrin may be processed only at the most C-terminal dibasic site resulting in the synthesis of gastrin-71. Am. J. Physiol. 279:G903-G909 (2000).

-1- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its dispessive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.

-I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and intestine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Phenylalanine amide (G-93 provides amide

Pept. 25:223-233(1989).

-I-FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach

-I- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach and increases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Phenylalanine amide (G-93 provides amide

                                                                                                                                                                                                                                                                                                                                                                                                                                 "Unique progastrin processing in equine G-cells suggests marginal tyrosyl sulfotransferase activity.";

Eur. J. Biochem. 25:432-438 (1998).

-!- FUNCTION: Gastrin stimulates the stomach mucosa to produce and secrete hydrochloric acid and the pancreas to secrete its digestive enzymes. It also stimulates smooth muscle contraction and increases blood circulation and water secretion in the stomach
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pyrrolidone carboxylic acid (Potential).
Pyrrolidone carboxylic acid (Potential).
Sulfotyrosine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Phenylalanine amide (G-96 provides amide

                                                                                         Science 273:1058-1073(1996).

Science 273:1058-1073(1996).

-|- FUNCTION: Catalyzes the NAD-dependent oxidative cleavage of spermidine and the subsequent transfer of the butylamine moiety of spermidine and the subsequent transfer of the butylamine moiety of spermidine and the subsequent transfer of the butylamine residue of the eIF-5A precursor protein to form the intermediate deoxyhypusine residue (BY similarity).

-|- CATALYTIC ACTIVITY: [eIF5A-precursor]-lysine + spermidine = [eIF5A-precursor]-deoxyhypusine + propane-1,3-diamine.

-|- COFACTOR: NAD (By similarity).

-|- PATHWAY: Hypusine biosynthesis; first step.
-|- SIMILARITY: Belongs to the deoxyhypusine synthase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;
